

Uncovering RapidCAPTURE for Box

Highlighting everyday business applications and benefits

Box RapidCAPTURE

RapidCAPTURE for Box turns every piece of content into machine readable business insights.

From purchase orders and invoices, to handwritten claims forms and signed contracts, key documents are instantly ingested, data is smartly captured and intelligently extracted, your documents are tagged with searchable metadata and stored where you need it most – in your RapidPORTAL for Box.

Multiple tables, checkboxes or multipage fields don't affect accuracy or extraction rates, and RapidCOGNITIVE machine learning and natural language techniques are on-hand to further improve your results.

There's no complex configurations or long set-up times, and its intuitive enough for everyone to use.

RapidCAPTURE in brief:

Content Extraction: capture, analyse and verify data from input documents in structured or unstructured formats.

Document Ingestion: able to ingest documents with multiple document formats in a single stream.

Smart capture: using machine learning and Natural Language Processing capabilities.

Document Tagging: identify and classify all types of documents

Six common use cases

In retail lending

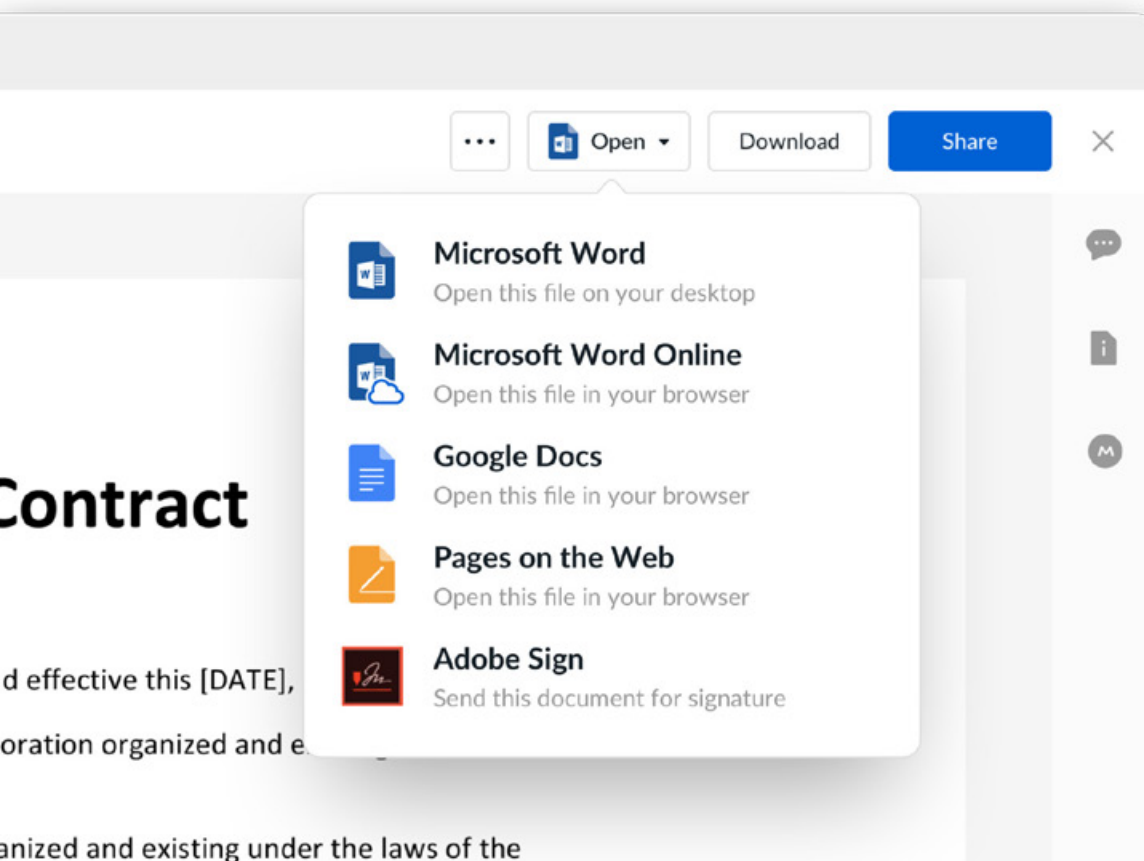

Processing loan applications typically require multiple resource-swallowing manual checks. RapidCAPTURE automatically examines applicant payslips and bank statements to accelerate the process, cut down on admin and offer customers a lightning quick decision.

In claims processing

Checking and validating insurance claims is a painstaking task – wading through hand-completed forms and a wealth of related documents and reports. Eliminating the data entry and automating the process, RapidCAPTURE frees claims analysts to focus on complex and exceptional cases.

Stand-out solution: RapidCAPTURE Mobile

RapidCAPTURE Mobile takes accident reporting to the next level. Photos – shot live at the scene or taken from documents – can be upload direct to RapidCAPTURE for further processing. Pictures can be retaken and/or reshuffled in a multipage document, with advisors and risk assessors able to verify and correct any potential read errors before submitting the ‘new’ document (with corrected metadata) back into the business process.

In human resources

It's easy to miss the best applicants when their CV is hidden among hundreds of others. Let the AI do the CV screening for you. Based on simple-to-set criteria, you'll be given only those CVs that tick all your boxes. In the race to secure top talent, every second counts. Enjoying a RapidCAPTURE competitive advantage can make all the difference.

In accounts payable

Accounts payable processing is one of the most labour intensive, time consuming and data input-based back-office operations. And it happens every day in almost every organisation. Use RapidCAPTURE to transform the P2P process – from invoice automation to PO reconciliation and payment.

In contract management

A historically manual process with significant business implications should wording and definitions be incorrect, or firms are contracting with blacklisted organisations. RapidCAPTURE eliminates the compliance and legal headaches; automatically scanning your document to ensure its watertight and you don't end up in court.

In mailroom automation

For large enterprises and offices, the pressures of the morning mail are considerable. Incoming post is often lost or misplaced and confidential letters can sit unopened on desks for days when employees are flexibly working. RapidCAPTURE is the foundation of a digital mailroom, and catalyst for eliminating the high costs of manual handling, sorting and physical delivery.
